## LED Area Lights

### 280W LED Area Light

Vision X is able to provide professional solutions due to the effectiveness of CUBE LED Technology. CUBE LEDs differ from standard diodes primarily in size and output per watt. A CUBE LED has a larger surface area, allowing more light to be emitted per individual watt. Additionally, having a larger surface gives the LED a much wider beam pattern, allowing more lux to illuminate a more wide-spread area. Currently, Vision X CUBE LEDs output an impressive 117 lumens per watt, making them the ideal LED for structural applications.

#### High Temp Glass

The optional Soda-Lime Glass lens helps protect the LEDs as well as internal components from extreme heat. Vision X recommends Soda-Lime Glass for applications that require intense heat.
