

CM Operator Remote Trainer

- **Eliminates the need for a full-scale simulator or CM for training your operators.**
- **Uses same switches and form factor of the actual Joy JNA CM remote providing the operator an easy way to learn how to operate the machine.**

Training of continuous miner (CM) operators can be a costly and time-consuming process. Traditional training methods include utilization of a fully functioning mining simulator or an actual continuous miner.

The Matrix Remote Trainer can provide training options with a smaller footprint at a lower cost by using a PC-based training system and USB-connected console that feature the same switches and form factor of a Joy JNA CM remote console.

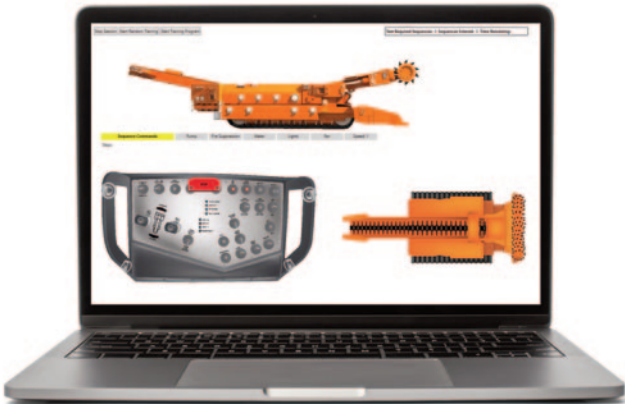

Simulates all CM movements, including:

- Cutter
- Conveyor swing
- Conveyor
- Gather head
- Tram
